

Rajarshi Bose

Full-Stack Developer

✉ rajarshibose2@gmail.com ☎ 9731173375 📍 Bangalore, Karnataka 🌐 r-bose 📄 rajarshibose2

👤 PROFILE

Full-Stack Developer with 2+ years of experience designing and delivering scalable enterprise web applications using ASP.NET Core, React.js, and PostgreSQL on AWS. Proven track record building production-grade RESTful APIs, serverless architectures, and generative AI features using Amazon Bedrock. Holds 4 active AWS certifications across Solutions Architecture, Development, AI, and Cloud — rapidly promoted within 12 months for expanded cloud solution ownership.

📁 PROFESSIONAL EXPERIENCE

01/2025 – Present Chennai, India	Software Developer - Solutions Tecnomomic Systems - Promoted within 12 months to cloud-based solution design across ASP.NET Core and React.js enterprise applications, expanding ownership from feature delivery to end-to-end architecture. - Evaluate and recommend AWS compute and database strategies — including Lambda vs. EC2 trade-offs — contributing to architecture decisions that balance performance and infrastructure cost. - Translate complex business requirements into technical specifications and production-ready full-stack implementations across backend and frontend layers. - Drive API design standards and backend architectural decisions to improve data consistency and reliability across distributed services.
01/2024 – 01/2025 Chennai, India	Software Developer Tecnomomic Systems - Built 10+ full-stack features using React.js and ASP.NET Core Web API, establishing structured API contracts and reliable end-to-end data flow for enterprise clients. - Developed 15+ reusable React components that reduced estimated frontend development time by ~25% across projects by standardizing UI patterns. - Designed and optimized PostgreSQL schemas and queries using Entity Framework Core, improving query performance by an estimated 30% through indexing and schema refactoring. - Engineered RESTful APIs incorporating business logic, input validation, and JWT-based authentication for secure access control across enterprise applications. - Integrated AWS Lambda and API Gateway to automate backend processing workflows, reducing estimated manual processing effort by ~40%. - Implemented generative AI features using Amazon Bedrock within existing enterprise backend systems, delivering AI-powered capabilities to end users ahead of schedule.

🧠 SKILLS

Languages & Frameworks — C#, ASP.NET Core (MVC & Web API), React.js, Python, SQL

Databases — PostgreSQL, DynamoDB, MySQL

Cloud & DevOps (AWS) — Lambda, API Gateway, S3, RDS, DynamoDB, OpenSearch, CloudFormation

Generative AI — Amazon Bedrock, Bedrock Agents, RAG Architecture, Prompt Engineering

Concepts — RESTful API Design, JWT Authentication, Entity Framework Core, Serverless Architecture, Single Page Applications (SPA), Microservices

Tools — Git, Postman, Visual Studio, VS Code

CERTIFICATES

AWS Certified Solutions Architect — Associate

AWS Certified Developer — Associate

AWS Certified AI Practitioner — Foundational

AWS Certified Cloud Practitioner — Foundational

PROJECTS

Admin UI for Amazon Connect Customization

ASP.NET Core MVC, React.js, AWS Lambda, API Gateway

- Built a full-stack web application enabling self-service customization of 100+ Amazon Connect contact flows, eliminating the need for manual backend intervention by non-technical teams.
- Reduced contact flow configuration turnaround time by an estimated 60%, empowering business users to manage settings independently without developer involvement.
- Implemented serverless backend automation via AWS Lambda functions exposed through API Gateway, handling secure, role-restricted workflow execution.

JavaScript Automation Chrome Extension

JavaScript, Chrome Extensions API

- Developed a Chrome extension automating repetitive enterprise data-entry workflows, saving an estimated 5–10 hours per user per month and significantly reducing human error.
- Built a custom side loadable installer enabling zero-IT-dependency deployment in restricted enterprise environments with no access to the Chrome Web Store.

Generative AI Chatbot with Amazon Bedrock Agents

Amazon Bedrock, Bedrock Agents, RAG, AWS Lambda, React.js

- Developed a production-grade conversational AI agent using Amazon Bedrock Agents and RAG architecture to orchestrate complex, multi-turn user interactions with context-aware, accurate responses.
- Secured enterprise data retrieval via AWS Lambda action handlers, ensuring compliant and governed access to backend knowledge sources.
- Designed an intuitive React.js chat interface that reduced estimated average query resolution time by ~35% compared to manual documentation lookup.

EDUCATION

08/2020 – 06/2024

B.Tech in Computer Science and Engineering

Vellore, India

Vellore Institute of Technology

KEY ACHIEVEMENTS

Promoted in 12 months

Elevated from Software Developer to Software Developer – Solutions within one year, reflecting expanded ownership in cloud architecture and solution design.

4 active AWS certifications

Solutions Architect, Developer, AI Practitioner, and Cloud Practitioner — an exceptionally rare combination at 2 years of industry experience.

Production GenAI delivery

One of few developers at this experience level to have shipped a real enterprise GenAI product using Amazon Bedrock and RAG in a production environment.
